About employment

Join our team as a web applications developer in our coffee shop! If you're passionate about technology, you love programming and design, and you're looking for an opportunity to combine your skills with the exciting world of gastronomy, this position is perfect for you!

Responsibilities and functions:

- Design and develop interactive and functional websites, ensuring excellent user experience.
- Create and maintain databases for the storage and management of information in the website.
- Optimize website performance, including loading speed, SEO optimization, cache management, file compression and optimization of database queries.
- Solve problems and make improvements to the existing website, including the identification and resolution of errors or malfunctions.
- Document code and development processes for easy maintenance, and future updates.
- Implement integrations with external systems, such as payment gateways, third parties or APIs.
- Perform usability testing and UI adjustments to improve the user experience.
- Implement security and data protection strategies, such as authentication, encryption and attack prevention.

In this position, it's critical to have strong communication skills and ability to work in a team, collaborating efficiently with multidisciplinary teams, transmitting the project requirements and participating in discussions with designers, managers of products and other stakeholders. In addition, since the field of web development evolves rapidly, it's essential to stay up to date with the latest trends, technologies and best practices, demonstrating an attitude of continuous and adaptive learning.

We will positively value the presentation of a portfolio or examples of previous projects to assess your skills and experience in web development.

Requirements

Minimum studies

Intermediate level Educational Degree, Higher level Educational Degree

Minimum experience

At least 2 years

Required languages

Spanish – Intermediate level

Knowledge

- Knowledge of HTML, CSS, JavaScript and some web development framework (React, Angular, etc.).
- Experience with version control systems (Git, SVN, etc.).
- Experience in the design and development of relational databases (MySQL, PostgreSQL, etc.).
- Experience in developing web applications using server-side technologies (such as Node.js or Django).
- Knowledge of web services and technologies, such as SOAP, JSON, XML, etc.

Aspects to be considered and taken into consideration:

- Experience in the development of mobile applications.
- Knowledge of a back-end programming language (PHP, Python, Ruby, etc.).
- Experience in the use of testing automation tools (Jest, Selenium, etc.).

- Problem-solving and debugging skills: emphasize the ability to identify and troubleshoot issues, debug code, and find efficient solutions to technical challenges that may arise during the development process.

If you are a person passionate about the development of web applications and you meet the minimum requirements and aspects to be valued, don't hesitate to send us your CV! We offer a pleasant working environment, interesting projects and a competitive salary. We hope to meet you soon!
